Upgrading to Apple Snow Leopard downgrades Flash security

The last thing you expect when you upgrade your operating system, is that you will have some of your security silently downgraded. But that's precisely what seems to have happened with Mac OS X Snow Leopard, which ignores that you have been keeping Adobe Flash up-to-date and downgrades it to an earlier version. Learn more and watch a video about this potential security risk. <http://www.sophos.com/blogs/gc/g/2009/09/02/apple-ships>

Fake anti-virus attack hits New York Times

Stop the presses! The website of the New York Times has been found serving up malicious adverts, designed to frighten users into believing they have a malware infection. Find out more about the poisoned pop-ups and how hackers take advantage of third-party advertising networks. <http://www.sophos.com/blogs/gc/g/2009/09/14/fake-antivirus-attack>

iPhone, iPod Touch, and QuickTime security updates

Multiple security vulnerabilities affecting the QuickTime software widely used by owners of Mac OS X and Windows computers have been patched - but have you installed the fixes? In addition, if you own an iPhone or iPod touch you should update your device to the latest version of Apple's operating system in order to defend against vulnerabilities that could allow hackers to run malicious code. <http://www.sophos.com/blogs/gc/g/2009/09/10/iphone-ipod-touch-quicktime>
